“Give Us This Day Our Daily Non-GMO Bread”

In the name of Green Energy, Monsanto and Exxon are up to their old tricks. Monsanto, the biotech giant, wants to monopolize the world’s major cereal grain and announced plans to develop genetically modified wheat to fight global warming. Ditto with Exxon Mobil, which plans to develop a new biofuel made with GM algae to eventually replace petroleum.

As the most primitive life form, GM algae will inevitably rise to the top of the food chain, threatening to wreak havoc with entire ecosystems. Algae also produce 70% of the world’s oxygen! There is no way GM wheat or algae can be controlled. They will inevitably contaminate natural and organic forms of life. Their effects on human health and the environment will be cumulative, catastrophic, and irreversible. If you want to preserve natural bread, pasta, and baked goods, as well as prevent the shortsighted corporate makeover of algae, the earth’s primal ancestor, please sign and return this petition.

I oppose GM wheat and GM algae and call on President Obama, Congress, USDA, EPA, FDA, DOE, and other regulatory bodies, as well as the food industry, the energy sector, and other policy makers and agencies in the U.S. and abroad to implement an immediate moratorium on the introduction of GM seeds, plants, animals, foods, fuels, pharmaceuticals, and other products.
